Some of the fields (columns) in the 'data' sheet are text cells containing the description of a piece of property or other needed information.. So that we can see entire data in that cell When you have more lengthy data in cells, you can Auto Adjust Column Width or Row Height in Excel VBA to show the entire data.. After we enter all data in the data tab we go to the display tab, select the column, then execute the auto fit row height menu item.. There can be more than a hundred 'title changes' in a single document The 'Display' sheet is composed of formulas (like this one - =INDIRECT('DATA!H'I6)) that refer to the data sheet cells..
